

Automatically authenticate: Passports, Visas, Travel and Identity Cards, and other identity documents from all over the world in seconds...

ULTIMATE ID AUTHENTICATOR

CAUTHS (Credentials Authentication System) is the world's most advanced ID authentication system for identity documents such as passports, visas, driver's licenses, military IDs, social security cards, alien registration cards, and so on.

Insert an ID – any ID – into a CAUTHS-supported document capture device. Within seconds, CAUTHS' software captures all the biographic and security information from the ID and informs you whether it is valid and, if not, what the associated risk is.

The system is backed up by a Database system that stores all identification information on the fly.

Features:

Easy

Just insert the document: CAUTHS automatically identifies any ID document – ICAO or non-ICAO.

Fast

In under 5 seconds, extracts all available data fields, runs tens of forgery detection tests specific to that document, and assigns a risk score to it.

Powerful

The Document Authentication Library™ can perform tens of validations on over 2,200 document types, greatly improving operator productivity.
